

Effective Network Information Collector

The **Effective Network Information Collector** is a website for users who are working in the IT (Information Technology) field. It is designed as mini Social Networking site for IT professionals where they can share their views and ideas. ENIC is web-based services that allow individuals to create a public profile, to create a list of users with whom to share connection, and view and cross the connections within the system. Successful projects often are the result of successful organization and communication. ENIC is a dynamic user-friendly and interactive website. The system service consists of a representation of each user with a profile, his/her personal details, social links, language skills and a variety of additional services. ENIC is a web based system which provides a means for users to interact over the Internet through e-mail. The users are also provided with the facilities like sending request, viewing friends profile etc.

In this project we basically implement a search engine where IT professional can search their related queries within the site itself. Also a public forum is included where registered users can post queries and answer related queries under their expertise.
